X GLOO TENT SPEC SHEET

STAND JUNI 2018

XC 3

Specifically designed to fit 10'x10' (3x3m) exhibition spaces, the high, dome-shape design of the XC 3 offers plenty of head space and a look that stands apart from traditional aluminum-frame tents or canopies. Weighing just over 8 kg and inflatable in 5 minutes, the XC 3 is easy for one person to transport and set up. Plus, the high-quality materials used ensure that the XC 3 offers users a solution to last for years.

The four air-filled TUBES are made of robust fabric, each with an internal air bladder made of PU film.

Material: DACRON - a special heavy-duty fabric with very low stretch characteristics
Color: grey - PMS Cool Grey 5
Printing: not possible

CLASSIC

Through this print method, the design is first printed onto a special foil. The foil is then placed on the desired product surface and put under a thermal press, which bonds the materials together.

Material: NESTRA - a high-quality, dyed polyester fabric with a PU coating
Color: all colors listed below, with equal color on both sides
Printing: partial thermal-transfer foil printing of designs in CMYK
Price: CLASSIC plus 239,-€ per printed m²
Ready to ship: in 2-4 weeks

DELUXE

Through this high-quality print method, the design is first mirrored and applied to a coated, heat-resistant transfer paper. Then, using high temperature and pressure, the ink becomes gaseous, and enters and becomes embedded in the fibers of the fabric. When printed, light shining through the fabric will cause the design from the front to appear as a light mirror image on the reverse side. Overall, a brilliant color result.

Material: LOTUS - a high-quality, printable polyester fabric with a PU coating
Color: white when unprinted
Printing: dye-sublimation printing of full-surface designs, with images and art in CMYK
Price: DELUXE
Ready to ship: in 4-6 weeks

DELUXE and CLASSIC components can be combined. However, color differences between printed and dyed material is likely and will not be recognized as grounds for complaints or returns.

SHAPING AIR

XG 6

The XG 6 combines the wide range of customization options of the XG 5 with a size nearly as large as the XG 8. The result? A tent which is designed to bring maximum exposure to your display and your brand, with a size large enough to comfortably fit all of your guests, seating, display shelving, or even boats or large automobiles.

The four air-filled TUBES are made of robust fabric, each with an internal air bladder made of PU film.

SHAPING AIR

XG 8

The biggest tent in our fleet for your biggest events. Great for large parties and gatherings, the XG 8 gives you a huge covered area for hosting your guests, and at the same time allows for high-quality branding of the roof and optional walls. Despite its massive size, the 8x8-meter Event Tent weighs only 42 kg, and can be set up with two people in as little as 25 minutes using an electric pump.

The four air-filled TUBES are made of robust fabric, each with an internal air bladder made of PU film.

Material: DACRON – a special heavy-duty fabric with very low stretch characteristics
Color: black and white
Printing: not possible

CLASSIC

Through this print method, the design is first printed onto a special foil. The foil is then placed on the desired product surface and put under a thermal press, which bonds the materials together.

Material: NESTRA – a high-quality, dyed polyester fabric with a PU coating
Color: all colors listed below, with equal color on both sides
Printing: partial thermal-transfer foil printing of designs in CMYK
Price: CLASSIC plus 239,-€ per printed m²
Ready to ship: in 5-6 weeks

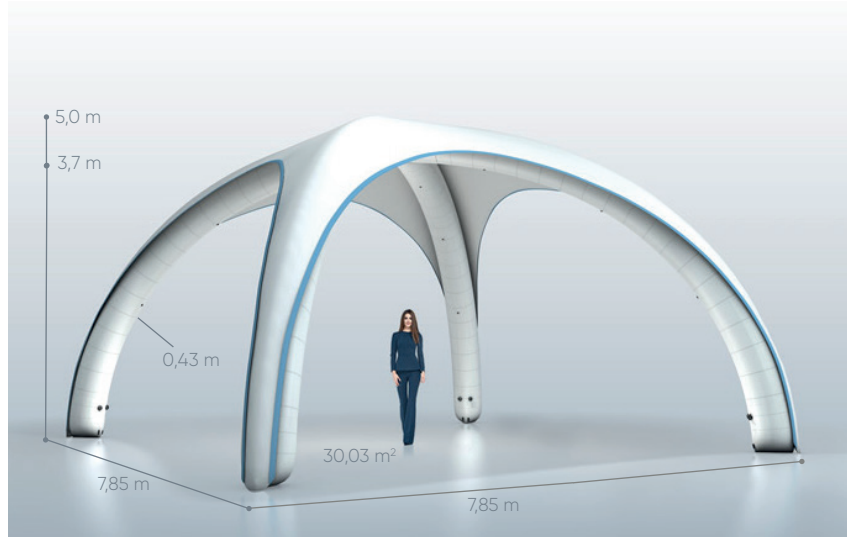

DELUXE

Through this high-quality print method, the design is first mirrored and applied to a coated, heat-resistant transfer paper. Then, using high temperature and pressure, the ink becomes gaseous, and enters and becomes embedded in the fibers of the fabric. When printed, light shining through the fabric will cause the design from the front to appear as a light mirror image on the reverse side. Overall, a brilliant color result.

Material: LOTUS – a high-quality, printable polyester fabric with a PU coating
Color: white when unprinted
Printing: dye-sublimation printing of full-surface designs, with images and art in CMYK
Price: DELUXE
Ready to ship: in 4-6 weeks

DELUXE and CLASSIC components can be combined. However, color differences between printed and dyed material is likely and will not be recognized as grounds for complaints or returns.

Through this print method, the design is first printed onto a special foil. The foil is then placed on the desired product surface and put under a thermal press, which bonds the materials together.

Material: NESTRA - a high-quality, dyed polyester fabric with a PU coating
Color: all colors listed below, with equal color on both sides
Printing: partial thermal-transfer foil printing of designs in CMYK
Price: CLASSIC plus 239,-€ per printed m²
Ready to ship: in 2-4 weeks

DELUXE

Through this high-quality print method, the design is first mirrored and applied to a coated, heat-resistant transfer paper. Then, using high temperature and pressure, the ink becomes gaseous, and enters and becomes embedded in the fibers of the fabric. When printed, light shining through the fabric will cause the design from the front to appear as a light mirror image on the reverse side. Overall, a brilliant color result.

Material: LOTUS - a high-quality, printable polyester fabric with a PU coating white when unprinted
Color: dye-sublimation printing of full-surface designs, with images and art in CMYK
Price: DELUXE
Ready to ship: in 4-6 weeks

DELUXE and CLASSIC components can be combined. However, color differences between printed and dyed material is likely and will not be recognized as grounds for complaints or returns.

SHAPING AIR

XG 6

The XG 6 combines the wide range of customization options of the XG 5 with a size nearly as large as the XG 8. The result? A tent which is designed to bring maximum exposure to your display and your brand, with a size large enough to comfortably fit all of your guests, seating, display shelving, or even boats or large automobiles.

The four air-filled TUBES are made of robust fabric, each with an internal air bladder made of PU film.

- Material:** DACRON - a special heavy-duty fabric with very low stretch characteristics
- Color:** all colors listed below
- Printing:** not possible

CLASSIC

Through this print method, the design is first printed onto a special foil. The foil is then placed on the desired product surface and put under a thermal press, which bonds the materials together.

- Material:** NESTRA - a high-quality, dyed polyester fabric with a PU coating
- Color:** all colors listed below, with equal color on both sides
- Printing:** partial thermal-transfer foil printing of designs in CMYK
- Price:** CLASSIC plus 239,-€ per printed m²

SHAPING AIR

XG 8

The biggest tent in our fleet for your biggest events. Great for large parties and gatherings, the XG 8 gives you a huge covered area for hosting your guests, and at the same time allows for high-quality branding of the roof and optional walls. Despite its massive size, the 8x8-meter Event Tent weighs only 42 kg, and can be set up with two people in as little as 25 minutes using an electric pump.

The four air-filled TUBES are made of robust fabric, each with an internal air bladder made of PU film.

Material: DACRON - a special heavy-duty fabric with very low stretch characteristics
Color: black and white
Printing: not possible

CLASSIC

Through this print method, the design is first printed onto a special foil. The foil is then placed on the desired product surface and put under a thermal press, which bonds the materials together.

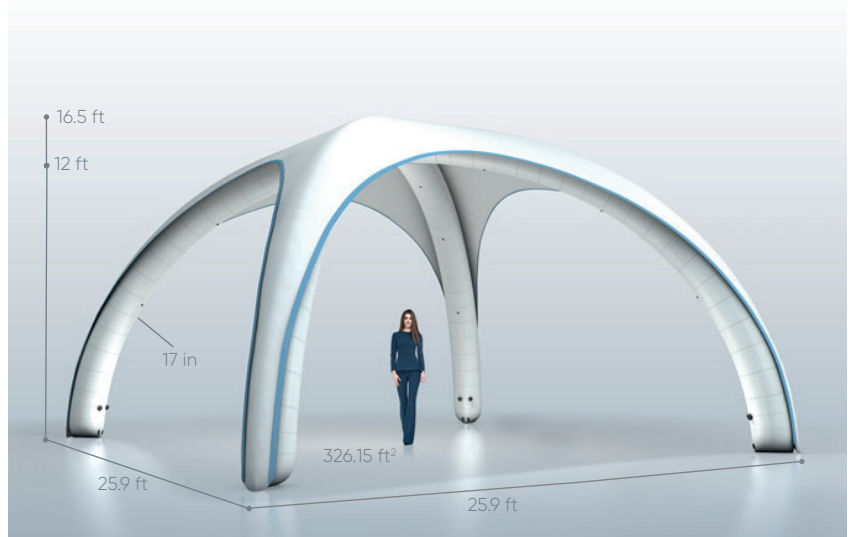

Material: NESTRA - a high-quality, dyed polyester fabric with a PU coating
